DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of group II invention and SEQ ID NO: 1 as the species and in the reply filed on 12/08/06 is acknowledged.

Examiner searched SEQ ID NO: 1 and found to be free of art and examiner extended the search and found art on SEQ ID NO: 9.

Claims 8 and 28-34 are pending.

Claims 8 and 28-34 are examined on the merit.

Claims 1-7 and 927 have been canceled.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 28-30, 32 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 00/61605 of Heston, et al.

In the instant application, applicants claim a peptide compound, which selectively binds to the extracellular portion of the human PSMA and comprises at least 5 residues in common with the consensus sequence QKHHNYL (SEQ ID NO: 109).

Heston, et al., discloses a PSMA-like protein sequence (SEQ ID NO: 2) particularly the region of the protein amino acid positions 218-245 that contains the 6 amino residues of SEQ ID NO: 109 of the instant application. The reference discloses that the protein sequence of SEQ ID NO: 2 has been used for diagnostic purposes for imaging the cells expressing the prostate specific membrane antigen (PSMA) or prostate specific membrane antigen-like (PSMA-like) protein. This procedure of binding of the PSMA-like protein to the cell surface clearly indicates that the SEQ ID NO: 2 binds to the extracellular portion of the cell expressing PSMA or PSMA-like protein (page 15, lines 22-28). Amino acid position 158 and position 289 has cysteine amino acids and hence can form a cyclic peptide via disulfide linkage in SEQ ID NO: 2 of the reference meeting the limitations of claim 31 and 33. Thus the presence of 6 amino acid residues of SEQ ID NO:109 of the instant application in SEQ ID NO: 2 of the reference and binding characteristics of the SEQ ID NO: 2 to the PSMA expressing cells meets the limitations of claims 28-30 and 32.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 28 and 34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In the instant application, applicants claim a peptide compound, which selectively binds to the extracellular portion of the human PSMA and comprises at least 5 residues in common

Art Unit: 1654

with the consensus sequence QKHHNYL (SEQ ID NO: 109) wherein the peptide comprises of one or more amino acid analogues.

From the recitation of the claims it is unclear as to the nature of the peptide analogs, number of amino acids analogs in the peptide and the positions at which the analogs are inserted in the peptide. Neither the claims nor the specification indicate what these analogs are and how many of these analogs are present in the peptide. Therefore, the claims as recited are indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Allowable Subject Matter

Claims 8 and 31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
